Connecting components of the end-to-end integrated workflow around extreme events

AI-based forecast for storm Ingunn Feb 2024 (Thomas Nipen)

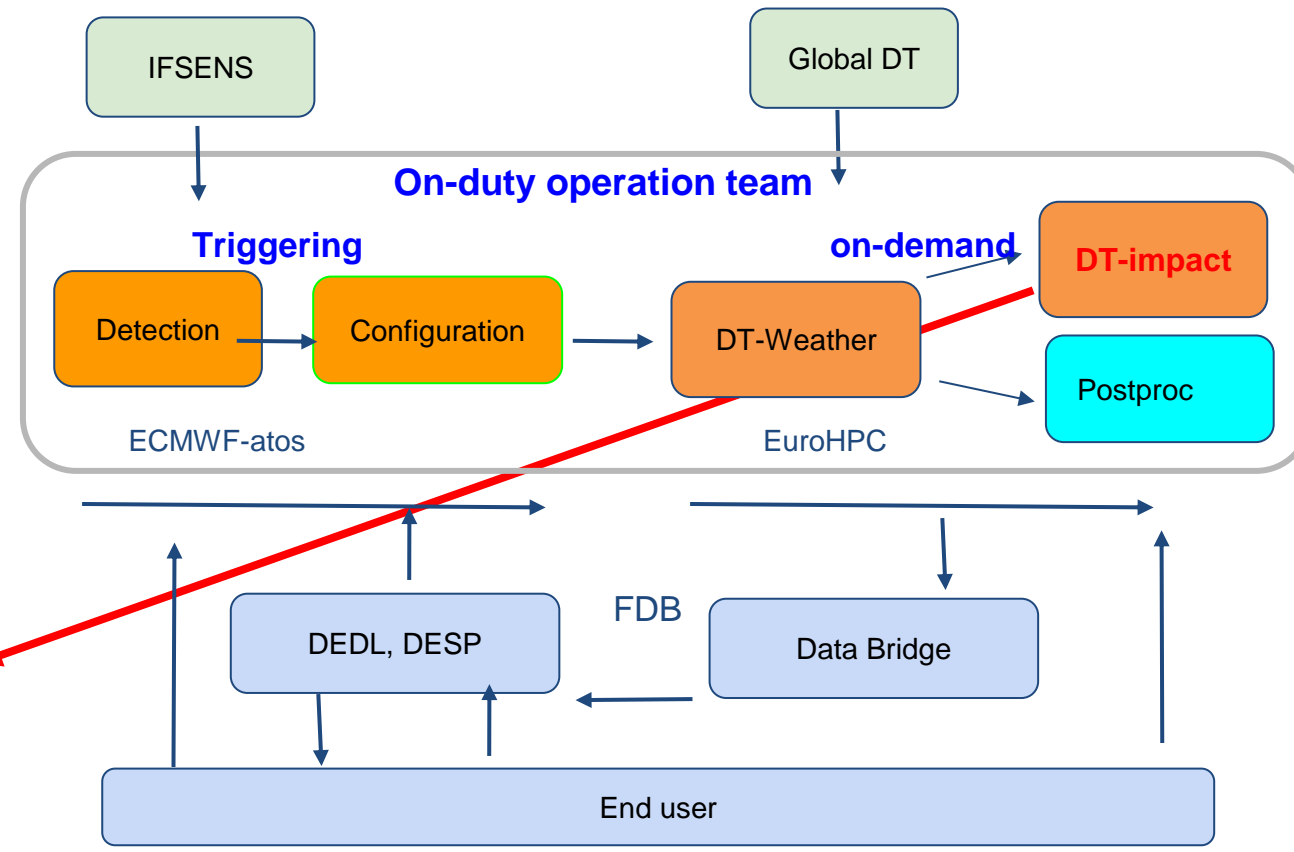

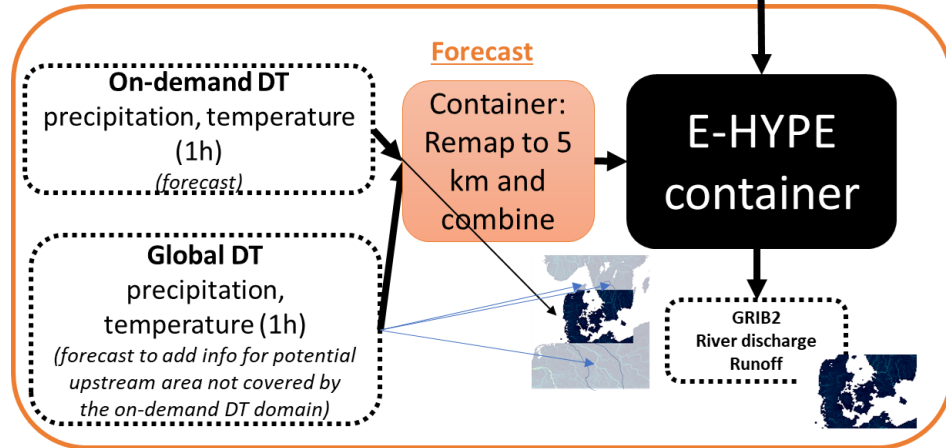

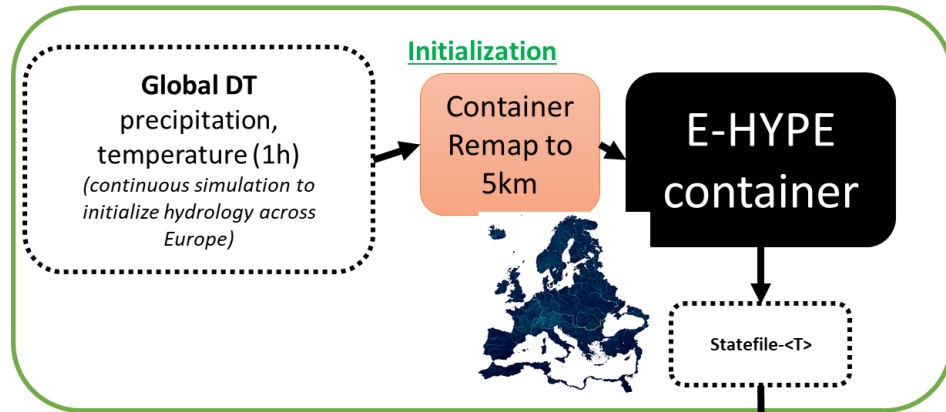

- Uncertainty quantification with either
 - physics-based sub-km EPS with limited numbers
 - or high resolution data driven weather forecast ensembles
 - or via statistical-processing approaches

On-Demand DT workflow

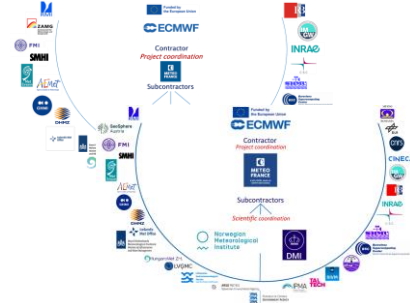

Connecting components of the end-to-end integrated workflow around extreme events

(Peter Berg, SMHI)

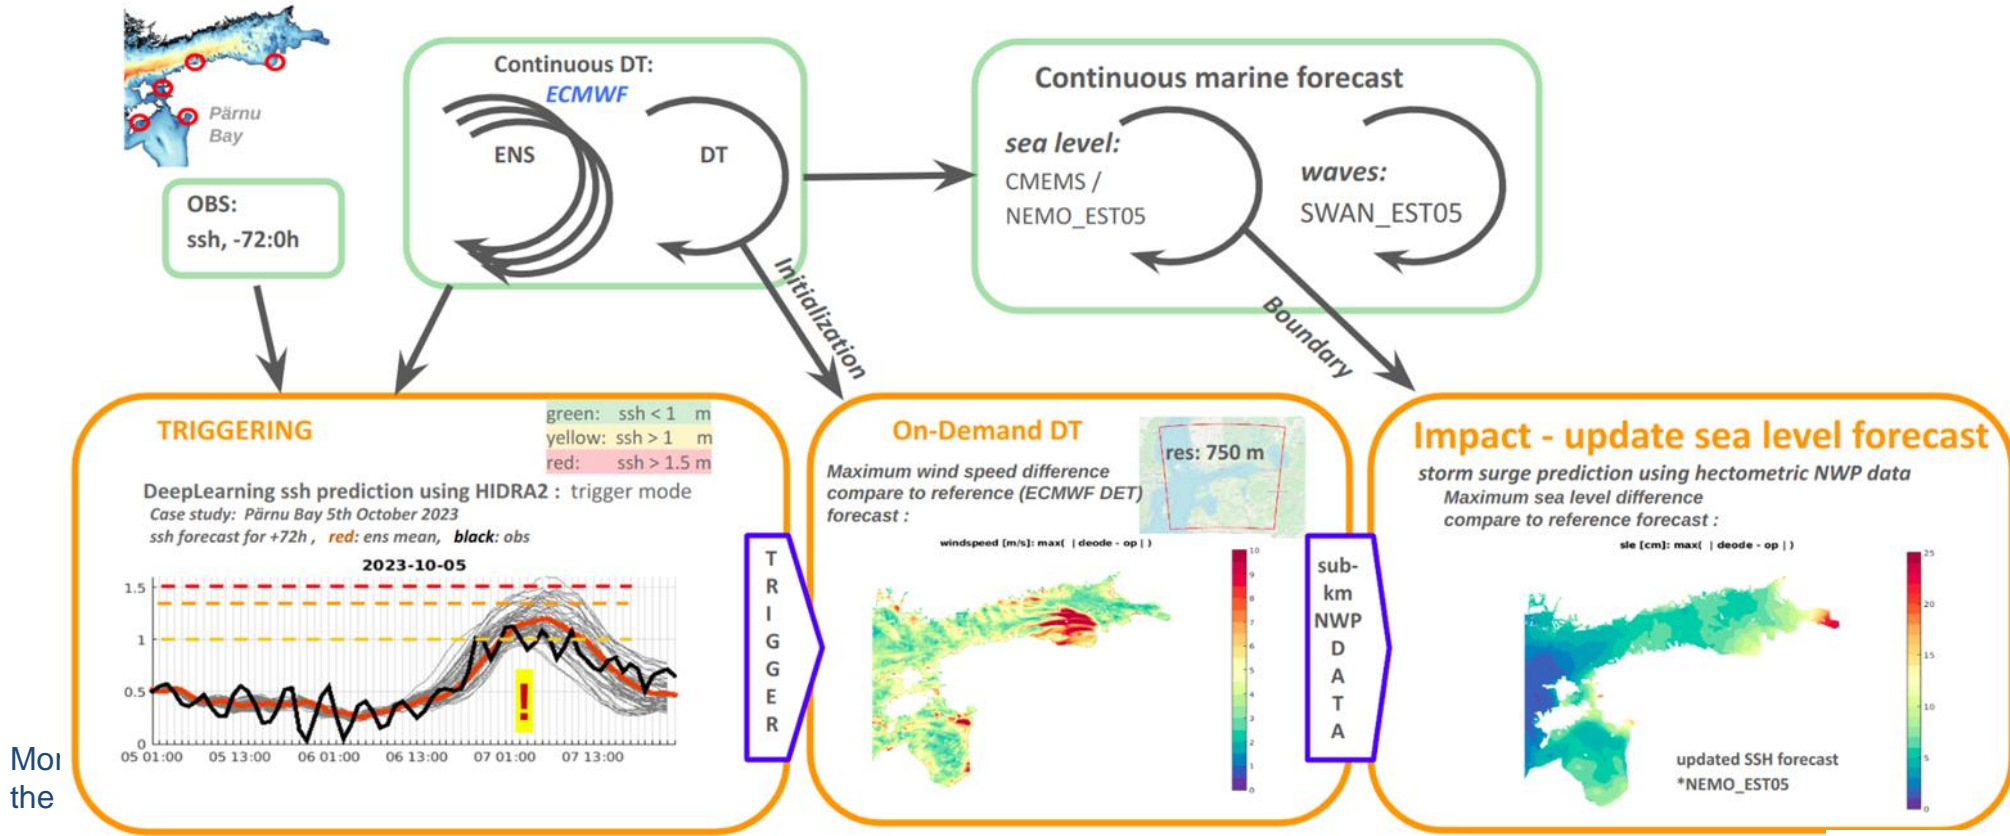

More examples on coupling with impact sectors in the presentations at the Extreme DT sessions
